

Description of Supplies Listed on the Other Side of This Order Blank

Post Cards

Mandel-ette Post Cards are $2\frac{1}{2} \times 3\frac{1}{2}$ inches in size and can be used either in the Mandel-ette or Model 1A. A package of 15 or a box of 50 can be loaded into the camera and left there indefinitely, until used.

Powder Developer

Powder developer is mixed with water and 26% Liquid Ammonia, directions on package. A package makes a pint of developer. It is absolutely necessary to use 26% Liquid Ammonia—household ammonia will not do. If ammonia of the required strength cannot readily be procured in your neighborhood we recommend the Liquid Developer.

Liquid Developer

This developer is ready to use. No ammonia need be added. If used developer is not mixed with unused developer and if it is always kept (when not in use) in a tightly corked bottle one pint will develop several hundred pictures. Developer can be used over and over again until used up.

Card Mounts and Folders

These are artistic mounts in which finished photographs can be placed. The use of them will greatly improve the beauty of your pictures.

Tripods

We recommend the use of a tripod. Ours is good, substantial and cheap in price.

Ammonia Tester

If you use powder developer you should have an ammonia tester to test the strength of your ammonia. If you use Liquid Developer you do not need an ammonia tester.

Graduate or Measuring Glass

This is only necessary when powder developer is used—it is to measure the quantity of ammonia to be used in mixing. If you use Liquid Developer you do not need the graduate.

Model 1A Mandel-ette

This is our best amateur camera. It makes the same size picture as the Mandel-ette, $2\frac{1}{2} \times 3\frac{1}{2}$, but has a better lens, and is equipped with an antinous wire release shutter.
